Wearwise AI — Fashion Knowledge Base Starter

Starter reference pack for fashion styling, outfit recommendations, garment understanding, and weather-aware wardrobe planning.

1. Knowledge domains

- Garment taxonomy: cardigan, sweater, shirt, T-shirt, jeans, trousers, skirt, dress, coat, jacket, footwear, bags, accessories.
- Visual attributes: primary/secondary color, pattern, fabric, texture, fit, silhouette, neckline, sleeve length, garment length, season, occasion.
- Styling knowledge: color harmony, proportions, layering, matching formality, balancing volume, footwear/accessory coordination.
- Context: temperature, rain, wind, season, occasion, user notes, available wardrobe items.
- Personalization: preferred style, fit preference, comfort, body/height inputs when voluntarily supplied; avoid rigid or judgmental body rules.

2. Color harmony rules

Rule	Definition	Example
Monochromatic	One hue in different lightness/saturation	Navy, mid-blue, pale blue
Analogous	Neighboring hues on the color wheel	Blue + teal + green
Complementary	Opposite hues; high contrast	Blue + orange
Triadic	Three hues spaced around the wheel	Blue + yellow + red accents
Neutral + accent	Neutral base with one expressive color	Gray + white + red bag
Warm/cool balance	Pair warm and cool tones deliberately	Camel + pale blue

Treat these as flexible heuristics, not hard rules. Consider hue, saturation, lightness, texture, and the visual weight of each item.

3. Style taxonomy

- Core: Casual, Smart Casual, Business Casual, Business Formal, Classic/Elegant, Minimalist.
- Trend / subculture: Streetwear, Old Money, Preppy, Y2K, Grunge, Vintage, Edgy.
- Lifestyle: Sporty/Athleisure, Boho, Romantic, Chic, Scandinavian.
- Allow multi-label classification: one outfit or garment can belong to multiple styles.

4. Weather-aware outfit logic

- Cold + wind: prioritize insulating layers and wind-resistant outerwear.
- Mild: lightweight knitwear, shirt/cardigan, optional outer layer.
- Warm: breathable, lighter fabrics and fewer layers.
- Rain: water-resistant outer layer and suitable footwear; avoid recommending delicate materials without a caveat.
- Use local forecast and user-provided notes as context, not as a substitute for wardrobe availability.

6. Suggested training record format

```
{
  "item_id": "wardrobe_001",
  "garment_type": "cardigan",
  "colors": ["cream", "brown"],
  "pattern": "solid",
  "fabric": "knit",
  "fit": "relaxed",
  "style_tags": ["minimalist", "smart_casual"],
  "season": ["autumn", "winter"],
  "occasion": ["daily", "office_casual"],
  "weather_fit": {"min_temp_c": 8, "max_temp_c": 18, "rain_suitable": false},
  "pairing_notes": ["works with denim", "pair with neutral trousers"],
  "source_license": "record source and usage rights"
}
```

7. Rights and quality checklist

- Track source URL, creator, license, date collected, and allowed use for each asset.
- Do not assume Pinterest images are free for commercial model training.
- Keep licensed training images separate from inspiration/reference-only images.
- Include diverse styles, seasons, body shapes, ages, and cultural contexts without treating style rules as universal.
- Evaluate recommendations with human review; fashion compatibility is subjective and context-dependent.
